DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of group IX in Paper No. 6 is acknowledged.

Upon further review and reconsideration, the inventions of groups XIII and IX are rejoined and examined on the record.

2. Claims 1-8, 11-19 are canceled and claim 20 is newly added.
3. Therefore, claims 9, 10 and 20 are pending and examined on the merits.

Claim Rejections - 35 USC § 112, 1st paragraph

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5. Claims 9, 10 and 20 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The written description in this case has only set forth an amino acids sequence of SEQ ID No: 2, and is therefore not commensurate in scope to claims that read on fragment and analogs of SEQ ID No: 2, which include analogs of SEQ ID No: 2 that bind to FAS-IC and fragments of SEQ ID No: 2 which binds to FAS-IC.

Art Unit: 1642

Vas-Cath Inc. v. Mahurkar, 19 USPQ2d 1111, clearly states that "applicant must convey with reasonable clarity to those skilled in the art that, as of the filing date sought, he or she was in possession of *the invention*. The invention is, for purposes of the 'written description' inquiry, *whatever is now claimed*." (See page 1117). The specification does not "clearly allow persons of ordinary skill in the art to recognize that [he or she] invented what is claimed." (See *Vas-Cath* at page 1116).

Applicant is reminded that *Vas-Cath* makes clear that the written description provision of 35 USC 112 is severable from its enablement provision (see page 115).

With the exception of SEQ ID NO:2, the skilled artisan cannot envision the detailed structure of the encompassed polypeptides and or encoded analogs or fragments and therefore conception is not achieved until reduction to practice has occurred, regardless of the complexity or simplicity of the method of isolation. Adequate written description requires more than a mere statement that it is part of the invention and a reference to a potential method of isolating it. The amino acid sequence itself is required. See *Fiers v. Revel*, 25 USPQ 2d 1601 at 1606 (CAFC 1993) and *Amgen Inc. v. Chugai Pharmaceutical Co. Ltd.*, 18 USPQ2d 1016. Although these court findings are drawn to DNA art, the findings are clearly applicable to the claimed proteins.

Furthermore, although drawn specifically drawn to the DNA art the findings of *The Regents of the University of California v. Eli Lilly* (43 USPQ2d 1398-1412) are clearly applicable to the instant rejection. The court held that a generic statement which defines a genus of nucleic acids by only their functional activity does not provide an adequate written description of the genus. The court indicated that while Applicants are

Art Unit: 1642

not required to disclose every species encompassed by a genus, the description of a genus is achieved by the recitation of a representative number of DNA molecules, usually defined by a nucleotide sequence, falling within the scope of the claimed genus. At section B(1), the court states that "An adequate written description of a DNA...requires a precise definition, such as by structure, formula, chemical name, or physical properties', not a mere wish or plan for obtaining the claimed chemical invention".

Support for allelic variants is provided in the specification on page 27 lines 2-22 where it is disclosed that mort-1 analogs are made by the addition, subtraction, or deletion from native mort-1 so as to generate mort-1 analogs that differ from that of native mort-1 by a single amino acid. And on page 28, lines 5-7 where mort-1 fragments are those that retain the FAS-IC binding capabilities. However, no disclosure, beyond the mere mention of analogs or fragments is made in the specification. This is insufficient to support the generic claims as provided by the Interim Written Description Guidelines published in the June 15, 1998 Federal Register at Volume 63, Number 114, pages 32639-32645.

Therefore only an MORT-1 polypeptide molecule having an amino acid sequence of SEQ ID NO. 2 meets the written description provision of 35 USC 112, first paragraph.

Conclusion

Art Unit: 1642

No claim is allowed. The closest art found is Boldin MP *et al* (Cell 1996 Jun;85(6):803-15), wherein it is disclosed that a MACH protein is able to interact with MORT-1 (aka FADD).
